Netled is the one-stop-shop for vertical farming, and a true turn-key project provider globally. We want your business to succeed. We support you throughout the entire growing process starting from facility design all the way to automated packaging.

With decades of experience in Controlled Environment Agriculture, vertical farming technology development and innovation, as well as planning and designing complete vertical farming operations, Netled is your perfect partner in indoor growing. We take pride in Netled's proprietary Vera® technology, the most advanced vertical farming system in the world. According to our customers, Netled is years ahead of the competition in terms of technology, know-how, and delivery capabilities. Do you want to be part of the future of food? Bring your vertical farming business ideas and let us take care of the rest.

Technology Consultation

Have you already started a vertical farm? Perhaps things are not working exactly as you expected, or it is simply technically more difficult than you imagined.

Reach out to us for an on-site evaluation of your technical challenges and possible renewal of your existing technology solution. Our service promise is simple: an honest evaluation of your existing technology and solutions, and a guaranteed working technical solution if possible.

Horticultural Services

A successful vertical farm requires much more than just the technology. You need trained horticulturists to test new plants, substrates, growing recipes, etc., as well as operating the technology; good people are hard to find.

Our horticultural and recruitment services provide you with trained and certified horticulturists specialized in vertical farming operations and our Vera systems to help make your vertical farm a complete success.

Vera® Technology

Our Vera® technology solutions are designed for growing multiple types of crops such as leafy greens, herbs, berries, flowers with many more options on the horizon. We have different solutions to suit different scales of production.

Our Vera® systems are also designed for efficiency and sustainability producing 2.5 times more crops per comparable growing area and 15 times more per surface area compared to single-level high-efficiency year-round greenhouse growing. Vera® technology also produces over 100 times more crops per surface area compared to normal single-season open-field farming.

According to customers and partners, Vera® is the most energy-efficient vertical farming solution in potted vegetable production.

Facility Services

You have an idea for a vertical farming business, and you have the funding and the space. How do you get started?

Going from the business idea phase to actually planning, designing and building a vertical farm is a huge undertaking, and one you will need help with.

We help with planning the vertical farm facility specifically for your project and the existing space. We help you end-to-end with the vertical farm design, materials and workflows, automation systems such as harvesting, packing, palleting, wrapping, etc., farming unit integration – everything you need to get started.
