

# Special cleaning agent defoams or foams strongly

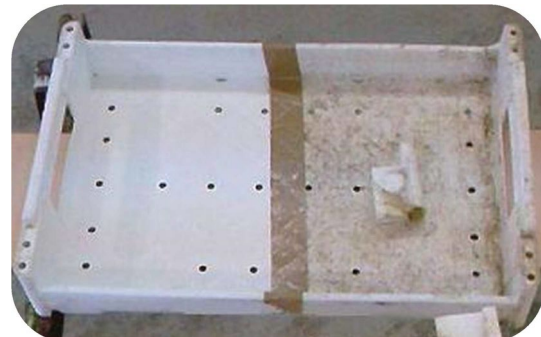

You select the suitable product yourself according to your requirements profile! **Defoaming or strong foaming?**

## MENNO HORTISEPTCLEAN®

**Defoamed** - alkaline, liquid, water-soluble cleaning agent concentrate for professional use in plant production, vegetable and ornamental plant cultivation. Cleans soiling, plant residues from transport containers such as pots, trays, pallets, boxes, crates, etc.

### Recommendation for use:

- No foaming at high pressure in pumping processes
- Insert for recirculating washing circuits
- Crate washing machines
- In washing machines for trays, pots, young plant plates, etc.

## MENNO HORTISEPTCLEAN® Plus

**Strong foaming** - alkaline, liquid, water-soluble detergent concentrate for professional use in plant production, vegetable and ornamental plant cultivation. Cleans soiling, plant residues from surfaces such as energy screens, Mypex / ribbon fabrics, roller tables, greenhouses, foil tunnels, web plates, etc.

### Recommendation for the use of the homogeneous, dense-creamy foam:

- Use for glasshouses, greenhouses, foil tunnels
- Preferably produced with the skumix in the low-pressure range
- Extension of contact and soaking time on smooth, vertical surfaces
- Penetration improvement in cracks and joints due to increased adhesion times
- Reduction of the application rate due to voluminous filling of profiles
- Use for roller tables, trays, young plant plates, or for manual re-cleaning.
- Increased cleaning performance due to shear forces of the foam on smooth, vertical surfaces

**Application concentration:** 1% or 2%, i.e. add 1 or 2 l of product to 99 or 98 l of water, respectively, while stirring.

**Application:** Depending on the degree of soiling, apply to the surface to be cleaned (plastic, wood, glass, concrete, metal, etc.) in the aqueous application concentration or with water that is up to 40 °C warm. Wet the surface sufficiently evenly, apply as a foam if necessary, allow to soak only briefly for 1 to max. 5 minutes without drying and rinse off with warm water under pressure.

**Please note:** Check the area to be treated for product resistance beforehand. Never spray directly or indirectly on neighbouring plants as damage is possible.
