

# Greenhouse Air Solutions

GrowAir®  
- we supply air  
quality with energy-  
efficient ventilation  
solutions

GrowAir by KE Fibertec provides efficient air distribution for cooling, heating and ventilation in (semi) closed greenhouses.

The system is based on a worldwide patented solution.

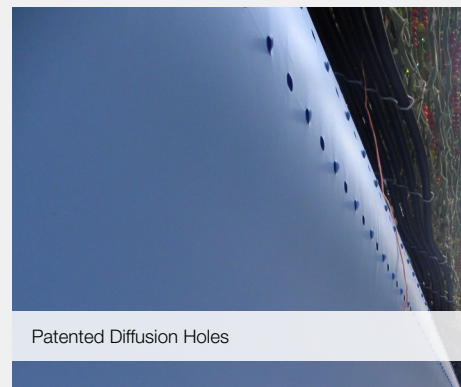

With years of experience our engineers are able to dimension air distribution systems that fits the design of the greenhouse. This will give you a perfect airflow, a stable temperature and provide an energy-efficient distribution of the air.

AIR THE WAY YOU WANT

Patented Diffusion Holes

## Efficient heating, cooling and ventilation.

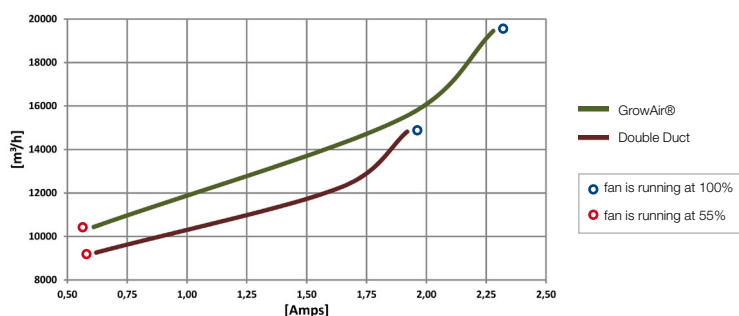

KE Fibertec has more than 30 years of experience when it comes to calculating and producing efficient air distribution.

We supply tailor made solutions for greenhouses that will give optimum growing conditions for your crop.

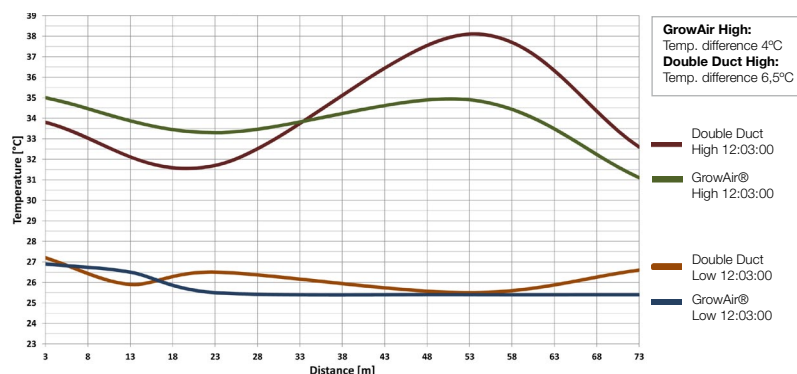

## Why choose GrowAir ducts?

- Avoid entrainment and turbulence
- Higher air quantity
- Uniform air distribution and temperature (vertical and horizontal)
- Equal growth of crop from beginning to end and from low to high
- Lower energy consumption
- Lower installation cost
- Lower disassembly cost

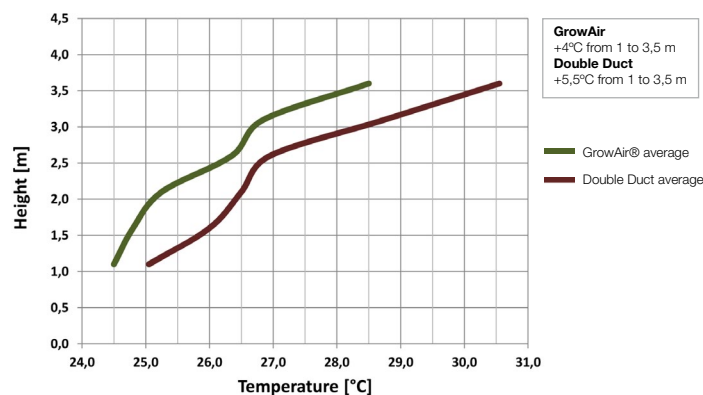

Fan efficiency

Temperature difference in the length of a duct

Average temperature difference in the height of the crop
