DUTCH QUALITY

Manufacturer, supplier of high-quality high-pressure fogsystems for horticulture, industry and agriculture.

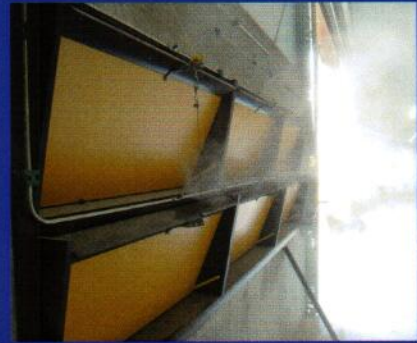

Mjtech
Fogsystems

MJ-TECH YOUR PARTNER IN HIGH-PRESSURE FOGSYSTEMS

The core business of MJ-Tech is clearly fogsystems, a niche market. We design installations that fog can be created. Because of the knowledge we are able to

create a tailored installation for every customer. Fog is necessary to control the humidity in a glasshouse as also you can create a cooling effect.

MJ-TECH OFFERS APPLICATIONS IN THE HORTICULTURE, INDUSTRY AND AGRICULTURE.

HORTICULTURE

Optimization and a more exact adjustment of the humidity and temperature by means of high-pressure fogsystem. By using an optimum humidity, you will be better able to direct the absorption of moisture by the leaves of the vegetation. All atomized water evaporates in the greenhouse. With adiabatic cooling, you have to ventilate less, which means that the CO₂ remains in the greenhouse for a longer period of time.

INDUSTRY

During the last few years MJ-Tech achieves many installations for protection of smell and bad odors. Unpleasant odors do not have to be harmful for your health and to be an annoyance for the neighbors and surrounding companies. By spraying water under high-pressure with addition of biodegradable products, we are able to solve the most common problems.

AGRICULTURE

Using MJ-Tech fogsystem, the intensive cattle breeding can have a cooling effect, without wetting the chicken. In case of a high temperature and a low humidity, the temperature can be reduced with 8 degrees. The complete system is fabricated in stainless steel. The pipes are stainless steel as well as the special designed MJ-Tech press couplings.
