

Jiffy air trays

Jiffy air trays are developed in close co-operation with professional foresters and nursery specialists to provide optimal air circulation. The unique design of the trays, with open construction, means that there is minimum contact between the growing medium and the tray. Together with the open wall concept of the pellets and the open air concept of the tray the system facilitates unrestricted root growth after planting.

Benefits of air pruning:

- Stops the growth of the roots at the surface of the growing medium and the plant is stimulated to generate more lateral roots
- Generates active root tips at all levels of the root
- Roots continue the growth unrestricted in the ground after planting or transplanting and the root is developed in a symmetrical and natural way.

Benefits of Jiffy air tray:

- Reusable (Injection molded tray)
- Optimal root growth
- No transplant shock
- No root defatation
- No need for root cutting

Tray item	Pellet size (Dry Dia) (mm)	Tray dimensions (mm)	# of Cavities for each tray	Row configuration (X & Y)
78000452	25mm	383 x 383	121	11 x 11
78000457	36mm	383 x 383	64	8 x 8
78001211	42mm	383 x 383	49	7 x 7
78000453	50mm	383 x 383	36	6 x 6
