# CANNAVIGIA
COMPLIANCE SOFTWARE SUITE

Vigilance Beyond Certification
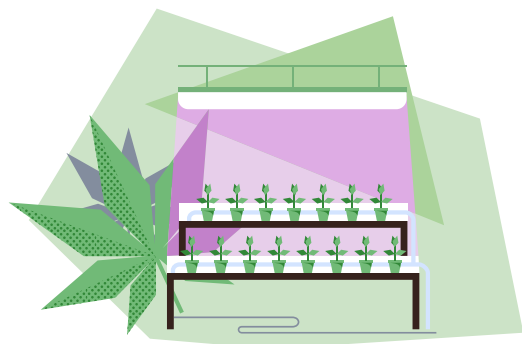

Cannabis Compliance Suite

ABOUT

Vigia AG is a Swiss company based in Zurich. The founders believe that every consumer deserves to know, where the products they consume, come from.

The innovative solution provides fully compliant and transparent processing of all steps along the cannabis value chain, opening access to the vast potential of the legal cannabis industry.

To realize this vision, the fascinating potential of the highly regulated hemp plant presented itself. As a first product, the Vigia team developed and launched Cannavigia Compliance Software. After decades of covert and opaque operations, Cannavigia Compliance Software is enabling a new era of sustainability and transparency.
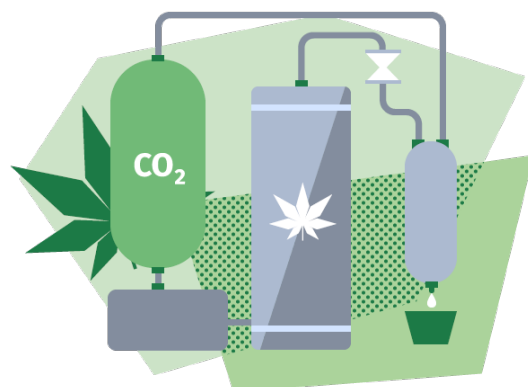

MODULES

Cultivation Module

The module for cultivation and harvesting practices is strongly linked to the GACP specifications and makes it easier for the cultivator to run an efficient and compliant operation. The movements of all plants and operations are directly and seamlessly inserted into the Cannavigia system, so that a clear production process is recorded in the form of a cultivation journal. This precise documentation of all work steps is essential for the traceability of the products created and protects not only the end consumer but also the cultivator from intentional malicious acts.

Manufacturing Module

The module for further processing is a further step towards a transparent and sustainable supply chain. Based on GMP specifications, the system allows efficient and transparent handling of all processing steps. This is necessary for legal requirements on the one hand, and for consumer protection on the other, and allows the company to gain a deeper insight into its work processes.

Distribution Module

All previously collected master data is bundled and fed into the logistics and distribution module, forming the basis for a completely transparent supply chain. Based on GDP (Good Distribution Practices), all movements are recorded and allow the company to control what happens to its products after they leave the cultivation and manufacturing facilities.

Customer Engagement Module

Through the CANNAVIGIA platform, you get the opportunity to interact directly with your customer by sharing your clean supply chain efforts and receiving feedback directly and easily. We provide you with a standardized and compliant labeling tool with QR codes. You get a modular marketing tool to share preferred data with your customers in an interactive way.

Conformity with FOPH Guidelines

Cannavigia has won a 10 year contract with the Swiss Health Ministry for the "Track & Trace" of the recreational cannabis pilot program.

With the amendment of Art. 8a of the Narcotics Law on September 25, 2020, the **Swiss Federal Assembly** created the possibility to approve THC-containing cannabis for **pilot projects** on a trial basis. The approval of THC-containing cannabis for medicinal purposes is also being discussed in parliament and will probably be passed soon. This opens up new options for action for the domestic hemp industry, but also places demands on quality and traceability. The Cannavigia Compliance Software has been viewed by the **Swiss Federal Office of Public Health (FOPH)** and considered to be of sufficient scope to implement the new standards for cultivation, processing and distribution. The use of Cannavigia in the various steps of the process therefore gives market participants the greatest possible assurance of meeting the FOPH's future quality and information requirements.

Why Cannavigia

Using Cannavigia in your cultivation, manufacturing and distribution processes gives you the following benefits:

Step-by-step guidance for entering the cannabis industry in a compliant manner.

Real-time monitoring of the various process steps through the use of advanced sensor, access and surveillance technologies

Improved yields through targeted management of cultivation areas

Automatic integration of all process data in one place improves learning processes

Increase the efficiency of your cannabis operation by up to 30%!

Reduction of post-harvest losses through optimized storage cycles and processing steps

Conformity with international processes (GACP, GMP) and national (SCC & BAG) guidelines

New marketing opportunities through complete declaration of origin

COSTS

Cannavigia is a cloud based SaaS model (Software as a Service). This means that you have your budget under control at all times.

We offer different price plans for different modules. After that, the cost depends only on the number of people who will use the software. You only need to factor in an upfront investment if you have specific requirements for Cannavigia Compliance Software.

Let's Talk

Have we planted the seed?
Have we sparked your interest?

We are happy to give you a personal demonstration of our compliance software at your convenience.
